PROFESSIONAL SUMMARY

Software Developer with practical experience in full-stack web applications, distributed backend services, and native-grade mobile development. Proficient in TypeScript, JavaScript, Node.js, Next.js, Vue 3, Flutter, and PostgreSQL. Experienced across the software development lifecycle, including sub-20ms edge caching, atomic transaction concurrency, encrypted session security, third-party logistics/payment integrations, and automated CI/CD container deployments.

EDUCATION

Politeknik Elektronika Negeri Surabaya (PENS) July 2023 – July 2026

Associate Degree in Informatics (A.Md.Kom) | GPA: 3.69 / 4.00

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Go, PHP, Dart, HTML, CSS

Frontend & Mobile: React, Next.js, Vue.js, Flutter, Tailwind CSS

Backend & APIs: Node.js, Express.js, Hono, Laravel, Gin, REST API, WebSocket

Databases & ORM: PostgreSQL, MySQL, MongoDB, SQLite, Prisma, Sequelize

CMS & Automation: WordPress, Elementor, Python Scripting / Automation

Cloud & DevOps: Cloudflare Workers & KV, Docker, Linux, Nginx, GitLab CI/CD, GitHub Actions, Tailscale, Infisical

Integrations: DOKU Payment Gateway, Biteship Logistics, Firebase (Auth, FCM, Crashlytics)

WORK EXPERIENCE

Freelance — Full Stack Developer June 2025 – Present

Stack: Python, PHP/Laravel, Node.js, React, Next.js, Vue.js, WordPress, Docker

- Developed and maintained custom full-stack web applications and REST APIs using Node.js, PHP/Laravel, and Python, integrated with responsive frontends in React, Next.js, and Vue.js.
- Built and launched production websites and company portals using WordPress and Elementor, handling custom layout theming, responsive design, and third-party plugin integrations.
- Engineered custom Python and Node.js automation scripts, data processing tools, and third-party API integrations to streamline manual client workflows.
- Handled debugging, troubleshooting, and feature additions across existing codebases, deploying containerized applications with Docker and Nginx on Linux VPS servers.

PT Wahana Meditek Indonesia — Backend Developer Intern June 2025 – December 2025

Stack: Node.js, Express.js, Sequelize, MySQL, WebSockets, GitLab CI/CD, Docker

- Maintained and expanded RESTful backend services using Node.js and Express.js, adapting to an existing codebase and complex data workflows for hospital operational systems.
- Designed relational database schemas and optimized MySQL queries using Sequelize ORM, improving data integrity and transaction performance across hospital inventory and billing modules.
- Implemented WebSocket-based event-driven processing to eliminate real-time transaction bottlenecks and maintain data consistency during concurrent staff usage.
- Diagnosed and resolved edge-case backend data processing issues, managing containerized services with Docker and automated build pipelines via GitLab CI/CD.

FEATURED PROJECTS

TAPINAJA — Full Stack Developer | tapinaja.com

Stack: Node.js, Express.js, PostgreSQL, Vue 3, Cloudflare Workers & KV, Docker, Infisical

- Architected an edge-accelerated NFC redirection system using Cloudflare Workers and KV, offloading ~95% of origin database traffic with sub-20ms global redirect response times.
- Engineered an end-to-end physical card manufacturing and QC workflow featuring an in-browser WebRTC QR scanner and atomic inventory reservation using PostgreSQL FOR UPDATE SKIP LOCKED to prevent checkout race conditions.
- Built an automated print batch engine generating streaming ZIP archives with bleed-margin PNGs and CSV manifests, backed by an asynchronous outbox queue ensuring eventual consistency between PostgreSQL and edge KV cache.
- Integrated DOKU payment gateway and Biteship logistics APIs with HMAC SHA-256 signature verification, idempotent webhook processing, automated thermal shipping labels, and 12 granular platform permissions.

PT Merdeka Sejahtera — Full Stack Developer | msb.pradita.my.id

Stack: Next.js 16, Strapi v5, PostgreSQL, Docker Compose, GitLab CI/CD

- Delivered a full-stack corporate B2B portal using Next.js 16 App Router and Strapi v5, implementing AES-256-GCM encrypted JWT session cookies (jose), automated token rotation, and strict same-origin request verification.
- Designed custom Strapi v5 schemas with automated database bootstrapping, multi-language localization (ID/EN), dynamic manufacturing seed scripts, and role-scoped customer inventory endpoints.
- Containerized the multi-service architecture using Docker Compose and established automated build and deployment pipelines to a Linux VPS via GitLab CI/CD on a self-hosted runner.

Hydrate (Final Year Project) — Lead Mobile Developer & Product Owner | [Google Play Store](https://play.google.com/store/apps/details?id=com.hydrate)

Stack: Flutter, Dart, Android, Firebase, GitLab CI/CD

- Led a 4-person team to build and publish a mobile health app on Google Play using Flutter, structured on Clean Architecture principles and GetX for reactive state management.
- Implemented persistent background tracking via device pedometer sensors and GPS geolocation (flutter_map) to continuously log user steps and routes even when the screen is locked or the app is minimized.
- Applied the Strategy Design Pattern to decouple calculation logic for metabolic caloric burn and hydration depletion rates across different exercise modes.
- Integrated Firebase Authentication, Cloud Messaging push alerts, and Crashlytics, accompanied by an automated GitLab CI/CD pipeline handling code analysis, testing, and release APK signing.

CERTIFICATIONS & LANGUAGES

Certifications: Junior Mobile Programmer — Vocational School Graduate Academy (Digital Talent Scholarship 2025) | [Verify Certificate](#)

Languages: Indonesian (Native / Fluent), English (Intermediate / Professional Working Proficiency)
